

## In a nutshell

The creation of a digital innovation culture does not just require employees to know how to work with Microsoft office, that they can send emails and use online cooperation spaces. A digital innovation culture asks for a new way of thinking in which there is room for digital solutions and approaches to current issues. A digital culture also keeps the end users in mind; new digital services should not only be modern, they should be most of all user-friendly. In this course, we focus on all these aspects in building a digital innovation culture. This course is based on the Interreg VB North Sea Region project Like!
